

## Care of your Treatex hard wax oil floor.

Congratulations on using Treatex Hard Wax oil to finish your Floor. By using Treatex Hard Wax oil you have selected the most durable and resistant wax oil currently available on the market. (Treatex hard wax oil is also suitable for use on furniture and worktops)

To get the most from your floor we would recommend the following maintenance programme be followed.

- 1) Keep the floor clean – The result of people walking on dirt and dust is no different to a high-powered sander at work! A good doormat will help. Use a soft Hoover or brush as and when required to keep your floor free from abrasive particles.
- 2) When the floor gets dirty, wash using Treatex Floor Care- this contains vegetable oils and Carnauba wax. Other brands of cleaning products can contain detergents that might damage the surface – Treatex floor care is designed to help maintain the finish without turning the floor slippery. This product can be applied by mop or machine (using a white pad).
- 3) For areas of high wear the floor can be renovated using Treatex polish. This is a diluted version of the hard wax oil. Clean the floor thoroughly using Treatex refreshment cleaner and leave to dry. Once dry, apply the wax to a small area at a time, either by wiping on a thin coat using a lint free cloth - take care not to leave cloth marks, or by buffing using white pad under a slow machine – again ensure the surface is buffed until no swirl marks are showing. Allow drying for two or three hours.

*NB to protect your floor we would recommend all furniture be fitted with felt pads.*

*Other products in the Treatex Range include; - Water Based lacquers - Exterior oil in wood shades and primary colours -, Decking oils - Natural preservatives - Tombstone and Terrace cleaner - UV resistant oils – Concrete stains and sealers.*

All Treatex products are made using natural products from renewable resources. Please ask your distributor for details.
